January 16, 2004 MDA #117 VOLUME 29 No. 02 PUB. Weekly

MARKET ANALYSIS - January 15, 2004

Michael Haigh-Assistant Professor University of MD Cooperative Extension

Corn futures started the week on new contract highs following bullish data from the USDA report. Nearby futures jumped 14 cents after the report data was released and held on to those gains for the entire session. Final production estimates for the 2003-2004 US crop were pegged at 10.114 billion bushels, and traders were expecting a bigger number, hence the bounce. A big effect was seen from the ending stocks number estimated at 981 million bushels (below expectations) and below last year's number of 1.087 billion. Domestic exports were increased by 50 million. Demand numbers were very supportive adding more icing to the bullish cake. Since the report not much has happened in the corn pit but there has been a bit of trend upwards – residual from the report – but for the most part this has been a sideways market for the last part of the week. Soybeans soared – we are currently sitting at \$8.42 nearby bean prices. About 34 cents of that number was attributed to buying after the report came out. The soybean production numbers were reduced by 34 million bushels to 2.418 billion versus trade estimates of 2.42 – 2.47 billion. Domestic carryout was left unchanged at 125 million bushels – a 27 year low. Soybean futures now hold the largest fund net long position on the CBOT grain floor at 5 to 1 net long versus short. Be very wary of this situation – they will offload at some point. Also, at a risk of spoiling the party one should be aware that new U.S. export sales are about to slow dramatically – it is a seasonal thing. Wheat also moved up due to strong bullish news in the report. The biggest item was the winter wheat plantings report; winter wheat acreage was pegged at 43.46 million acres – around 2 million less than what trade was expecting and a 3% fall over the last year. News that China is sending a wheat buying delegation was also very supportive. Export activity looks like it is gaining momentum too. Things are looking good all around - enjoy it while it lasts.
